

1. Data Cleaning RMD

- a. We created a data cleaning R Markdown in order to clean the raw student data. We only kept the variables and observations that made sense for our data description. We exported our clean data into a csv file in order to use it in our dashboard and model.

2. Introduction RMD

- a. We used a separate R Markdown file to incorporate some introductory items. This Markdown had our Business Value Proposition, Data Description, and our audience and purpose.

3. Dashboard

- a. This R Markdown file contained all of the code needed to create our dashboard including some data description graphs, as well as our final regression model to predict salary from the number of internships.
